

Recovery of damaged or deleted files from storage device using TestDisk and PhotoRec.

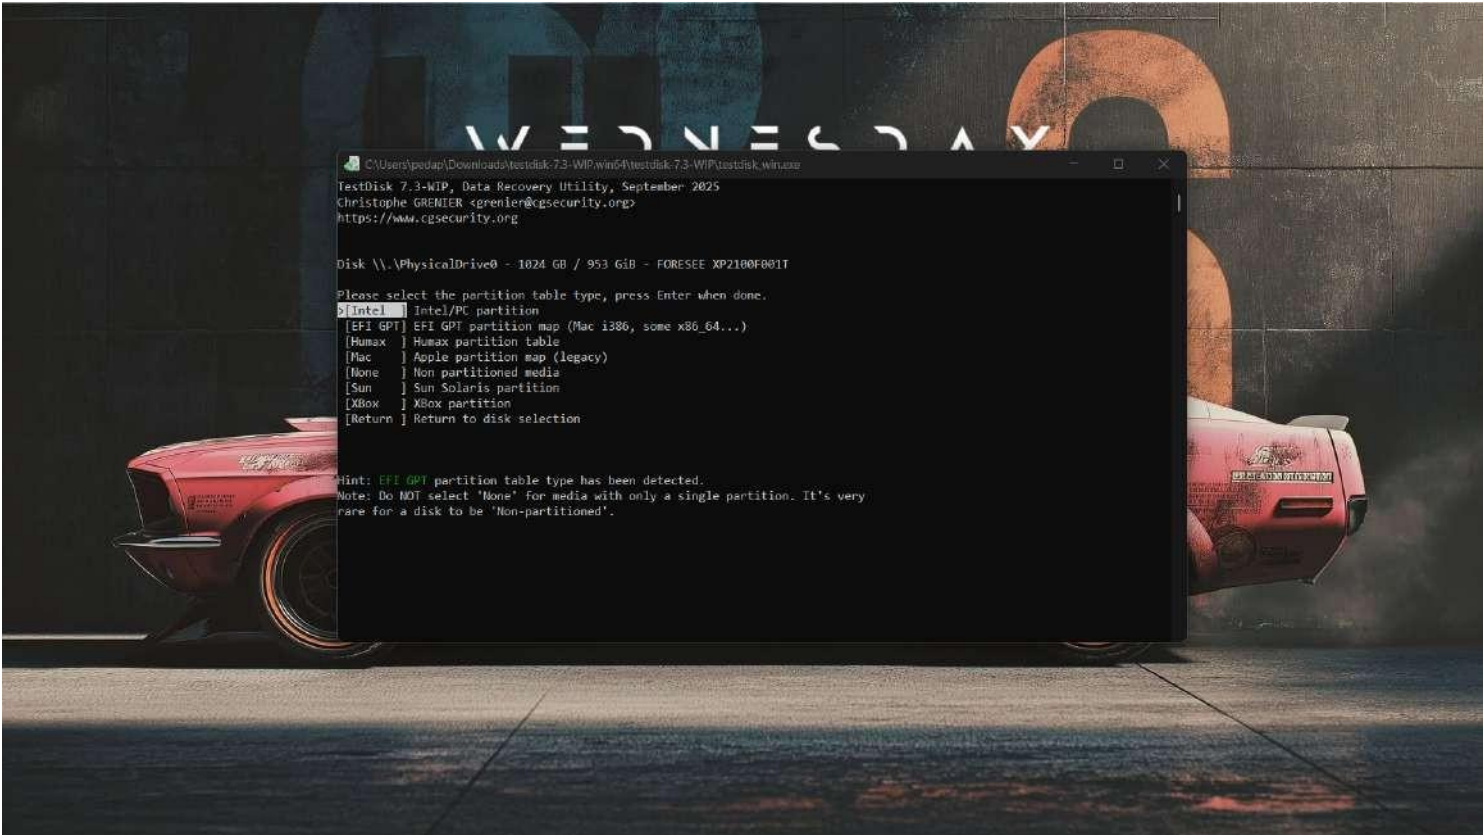

1. Open TestDisk and Create a new log file.

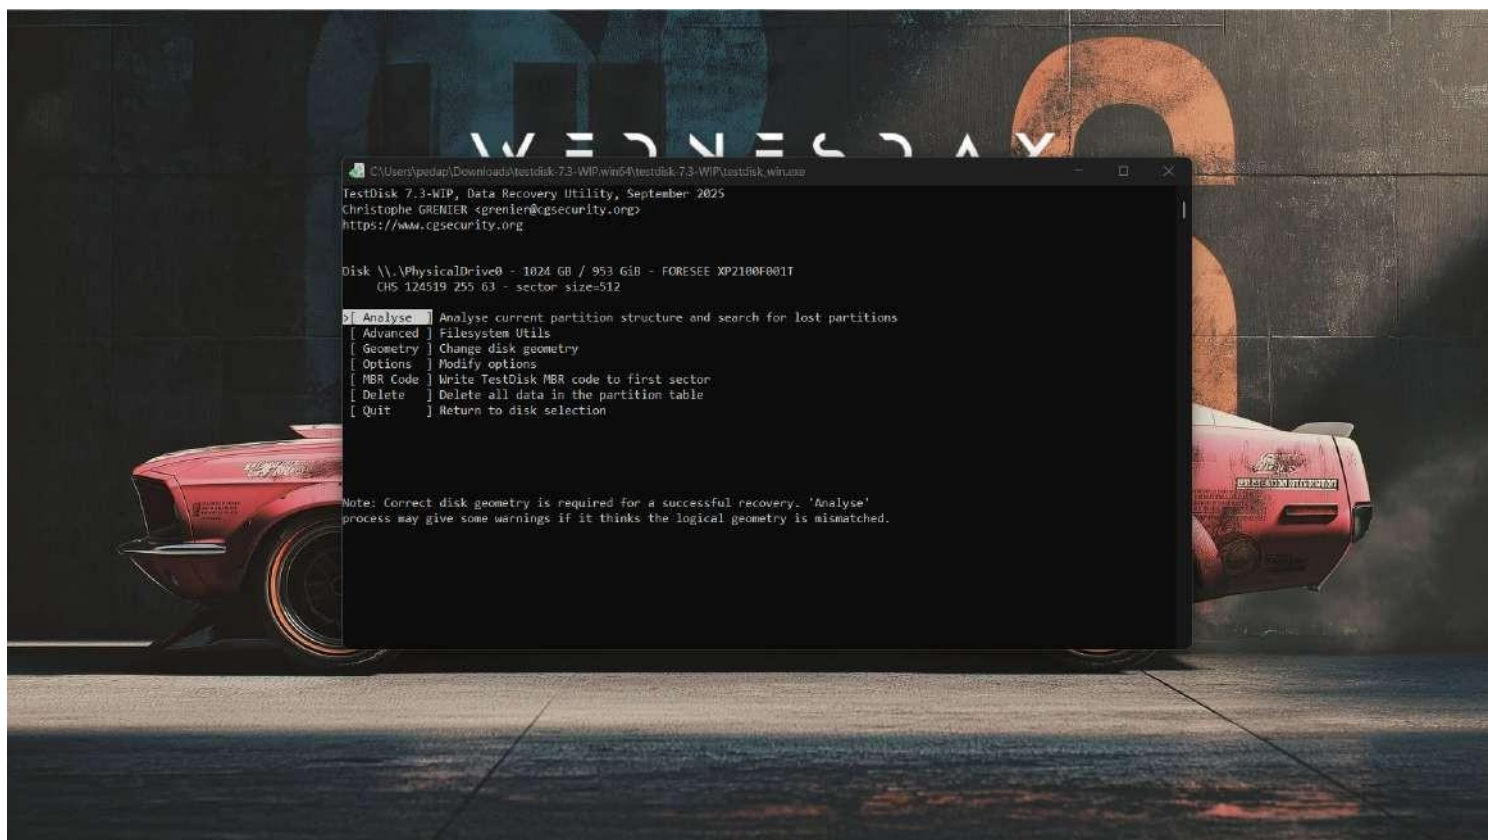

2. Select a media and then proceed.

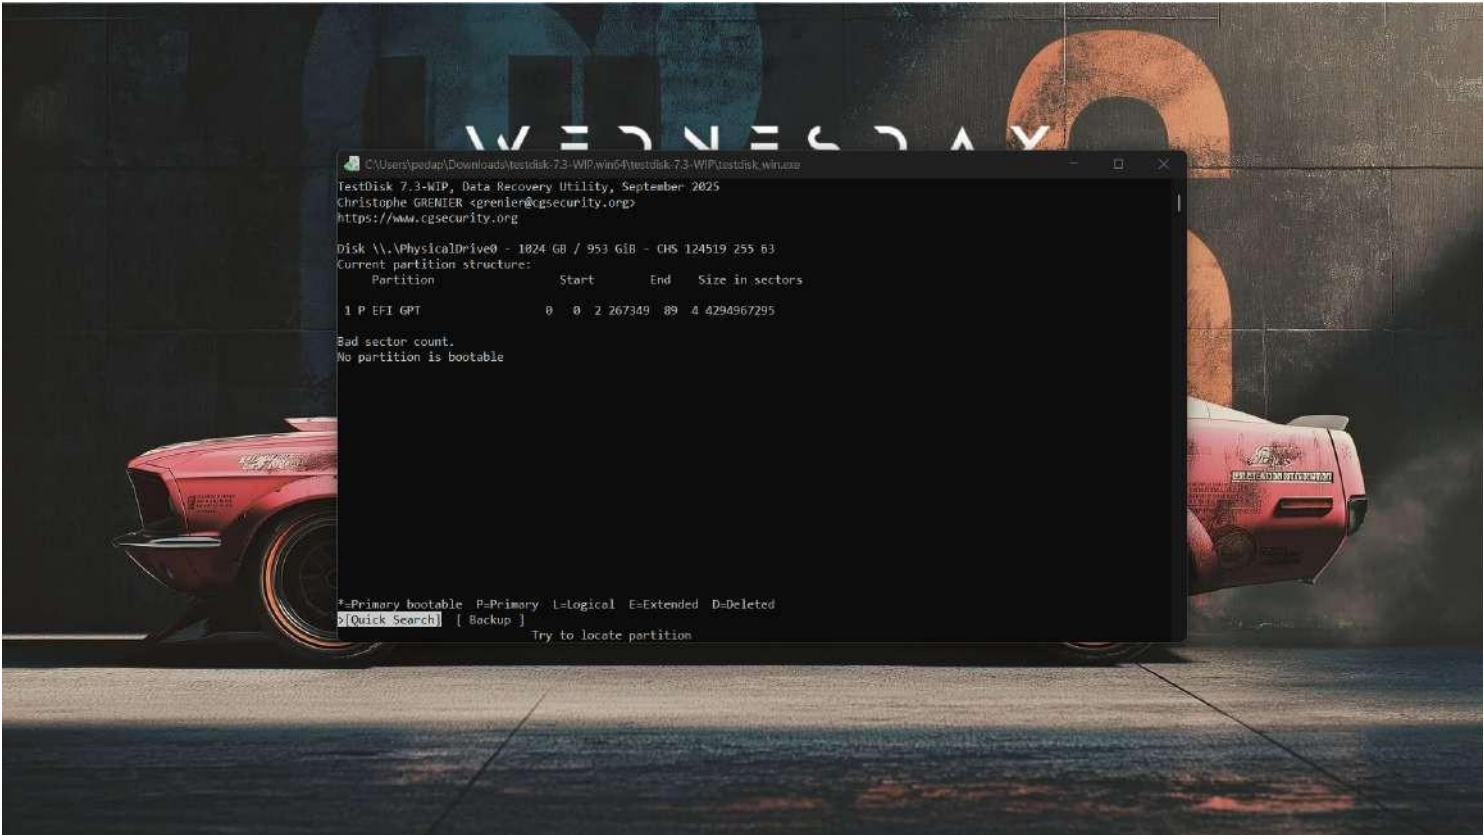

3. Select the partition table type and proceed.

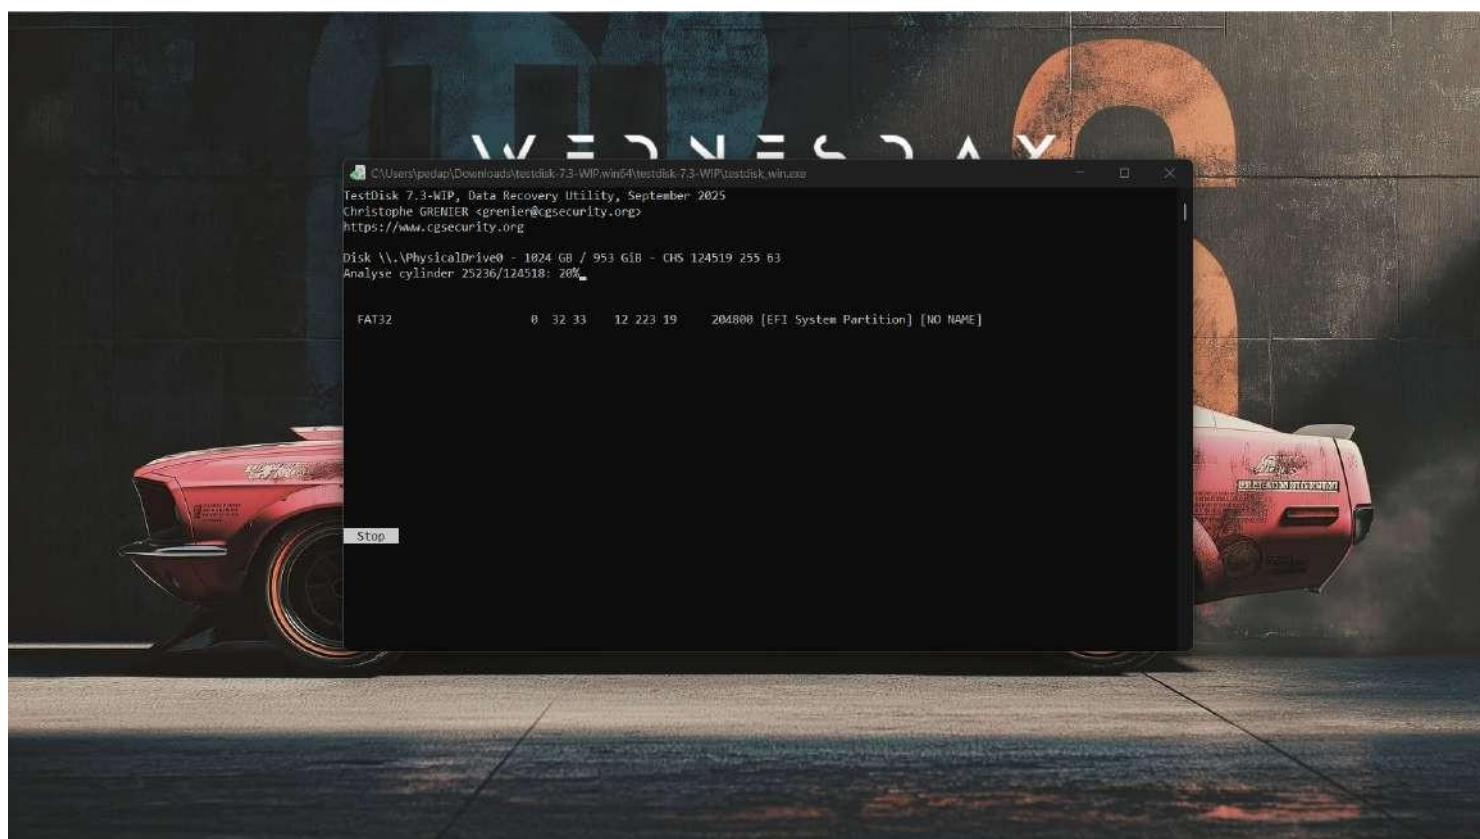

4. Now click on analyze to analyze the current partition structure.

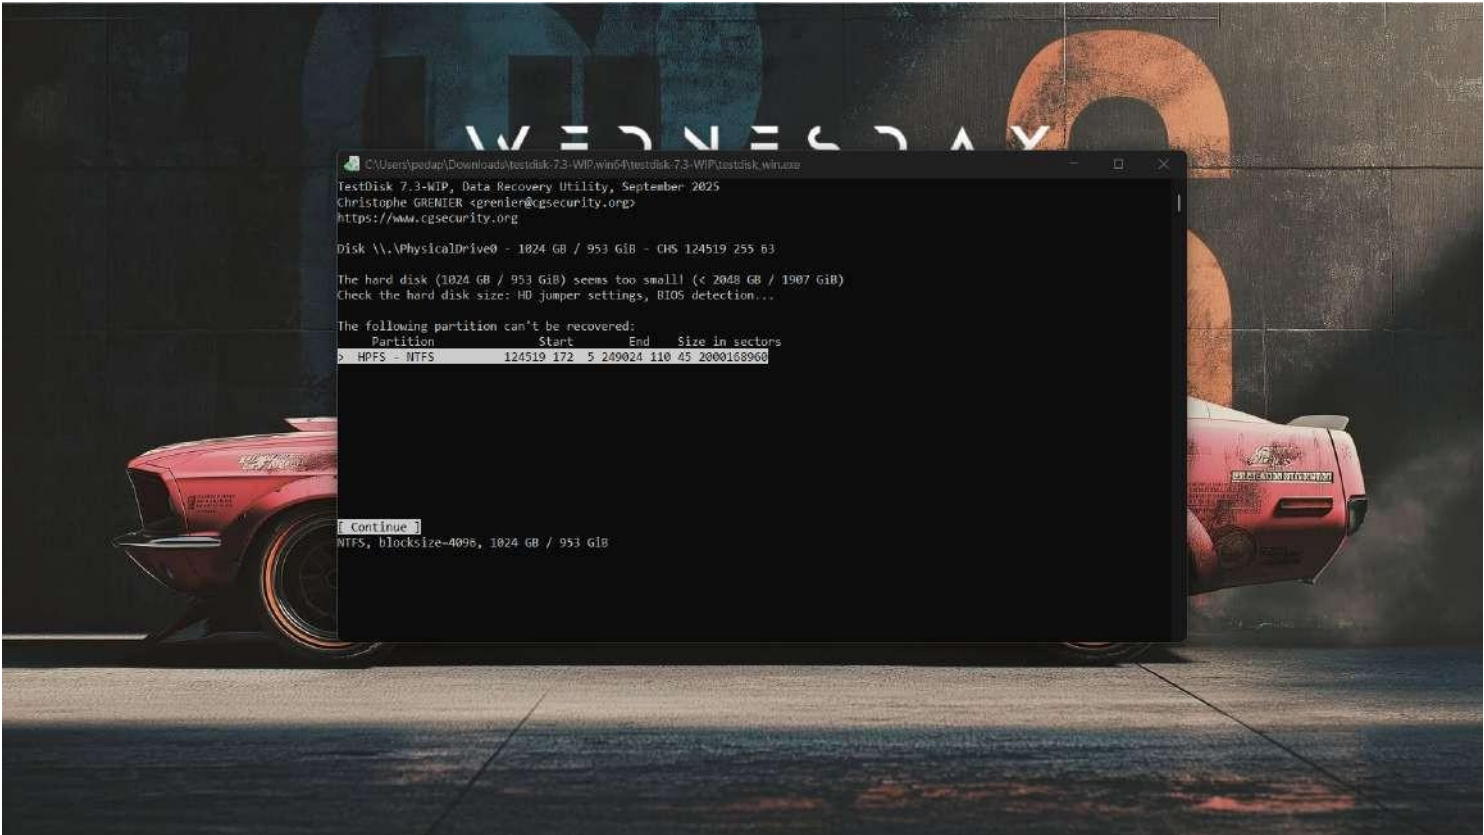

5. Select Quick Search to locate the partition.

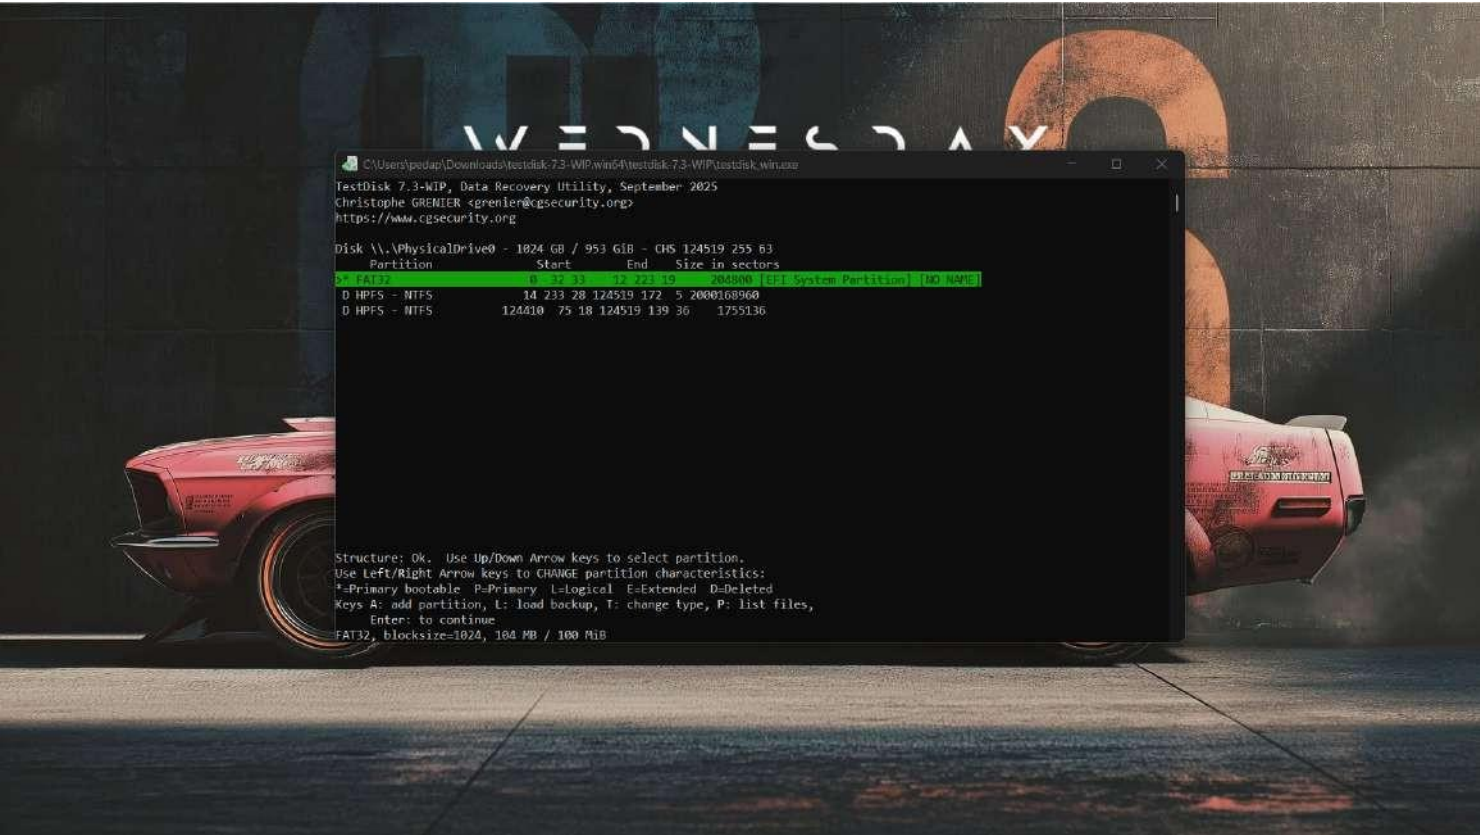

6. Wait until the tool analyse the cylinder.

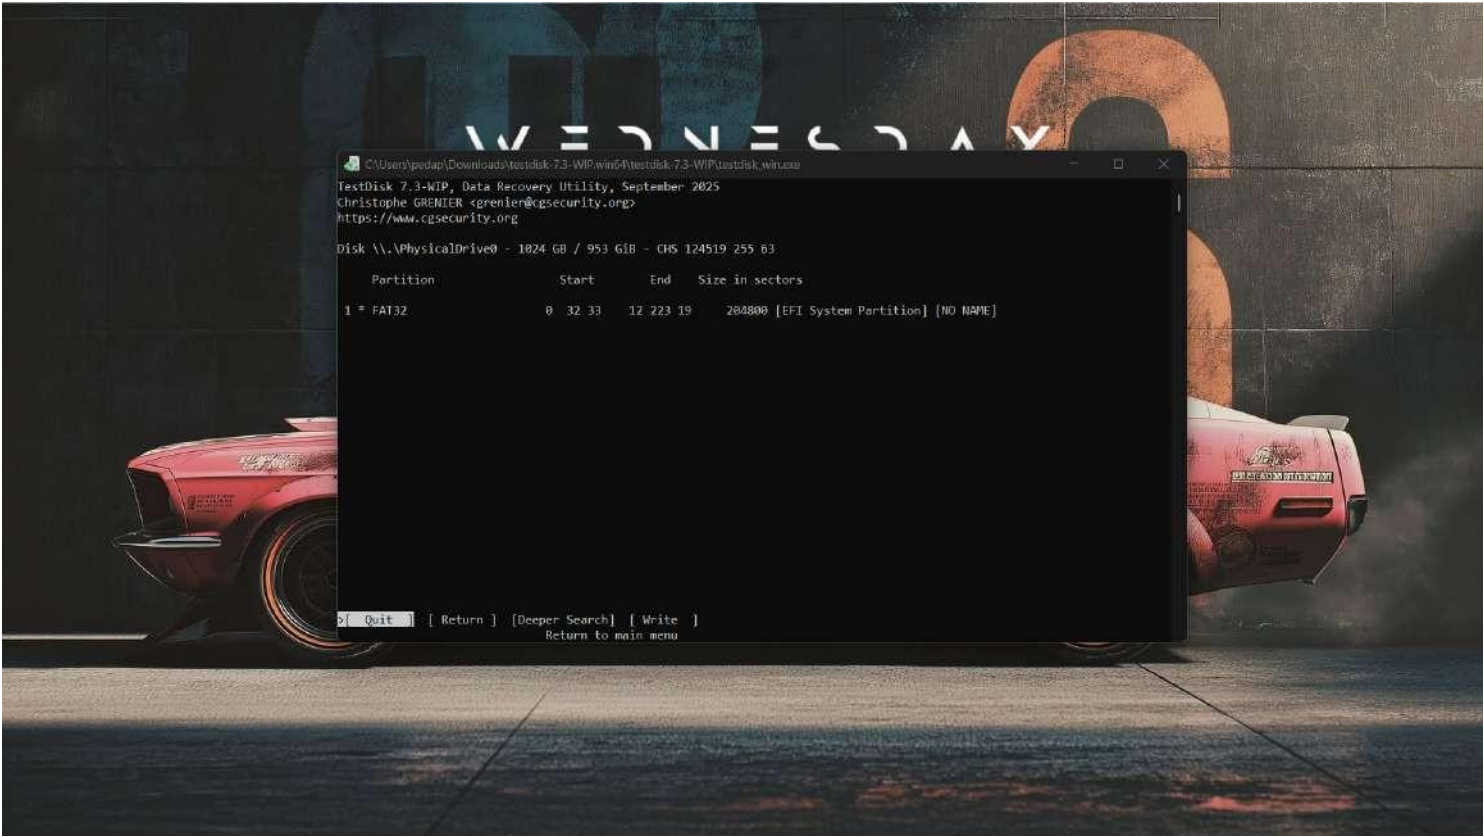

7. After completion of analysis, click on continue.

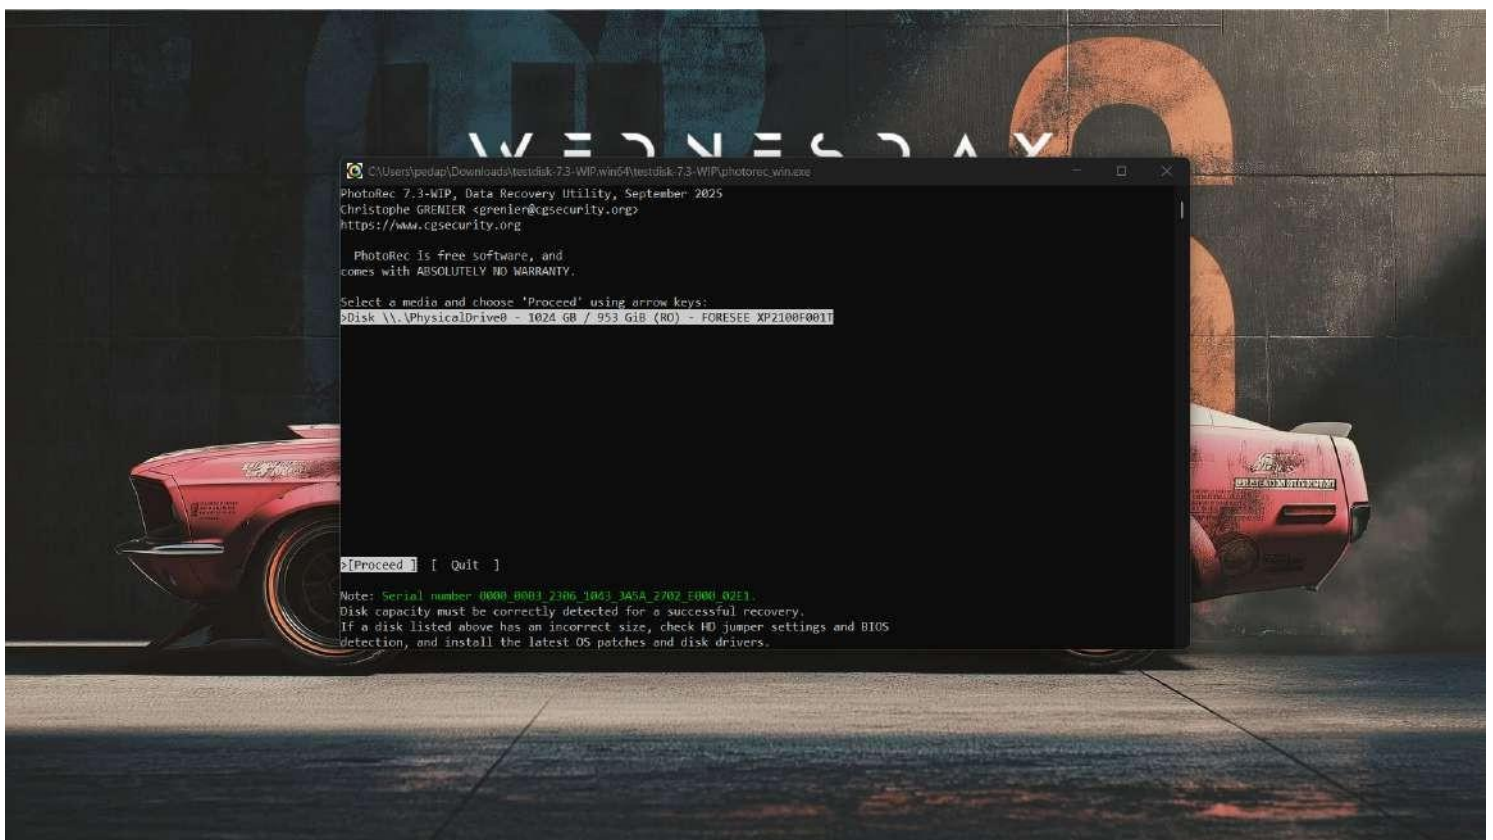

8. Now select the partition from the listed ones as per the keys provided. Here I selected Deleted which is represented as key-D.

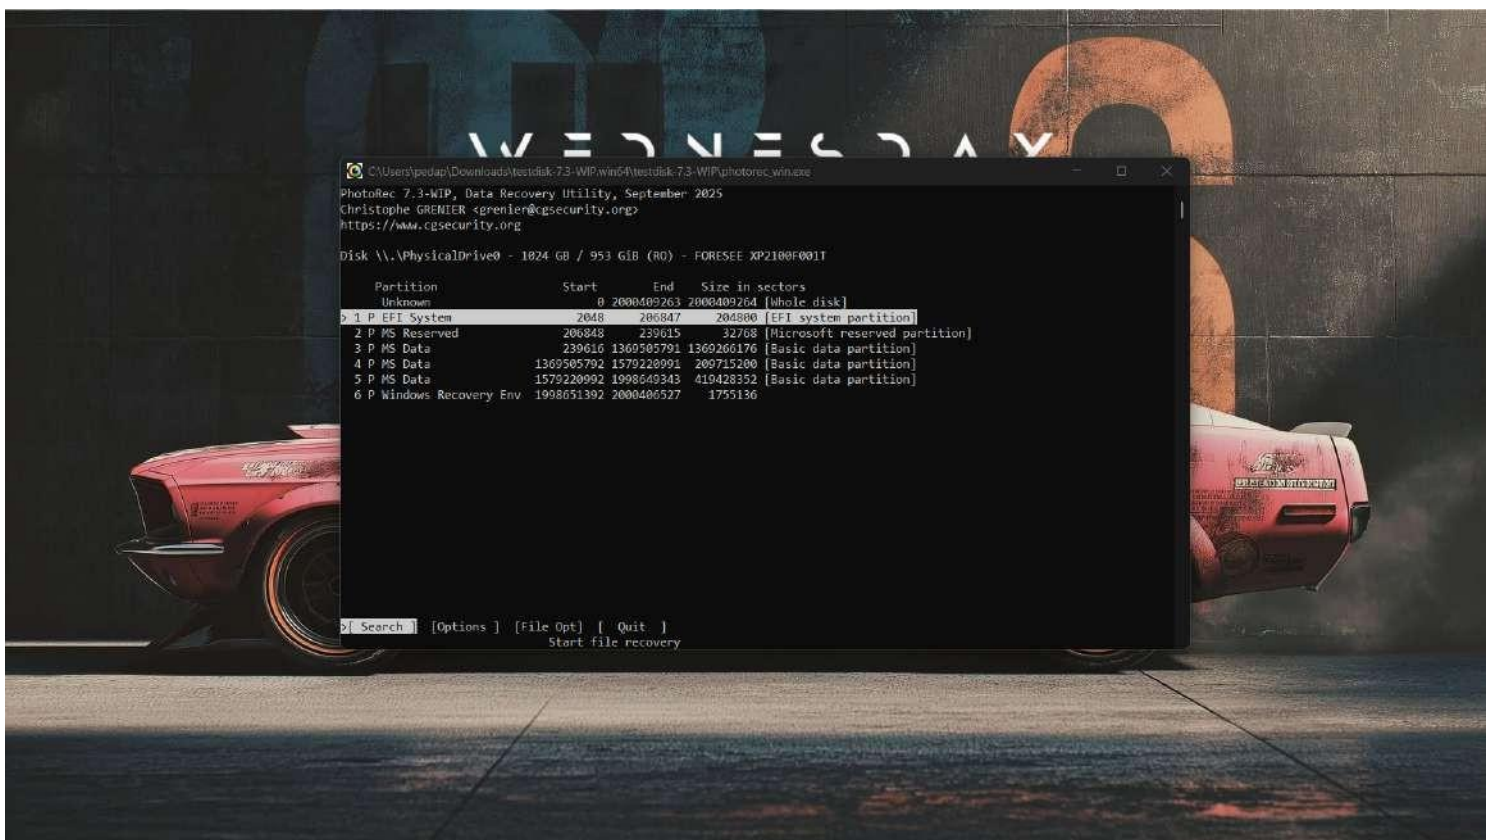

9. Now you will get the partition details from TestDisk tool and now go to PhotoRec tool.

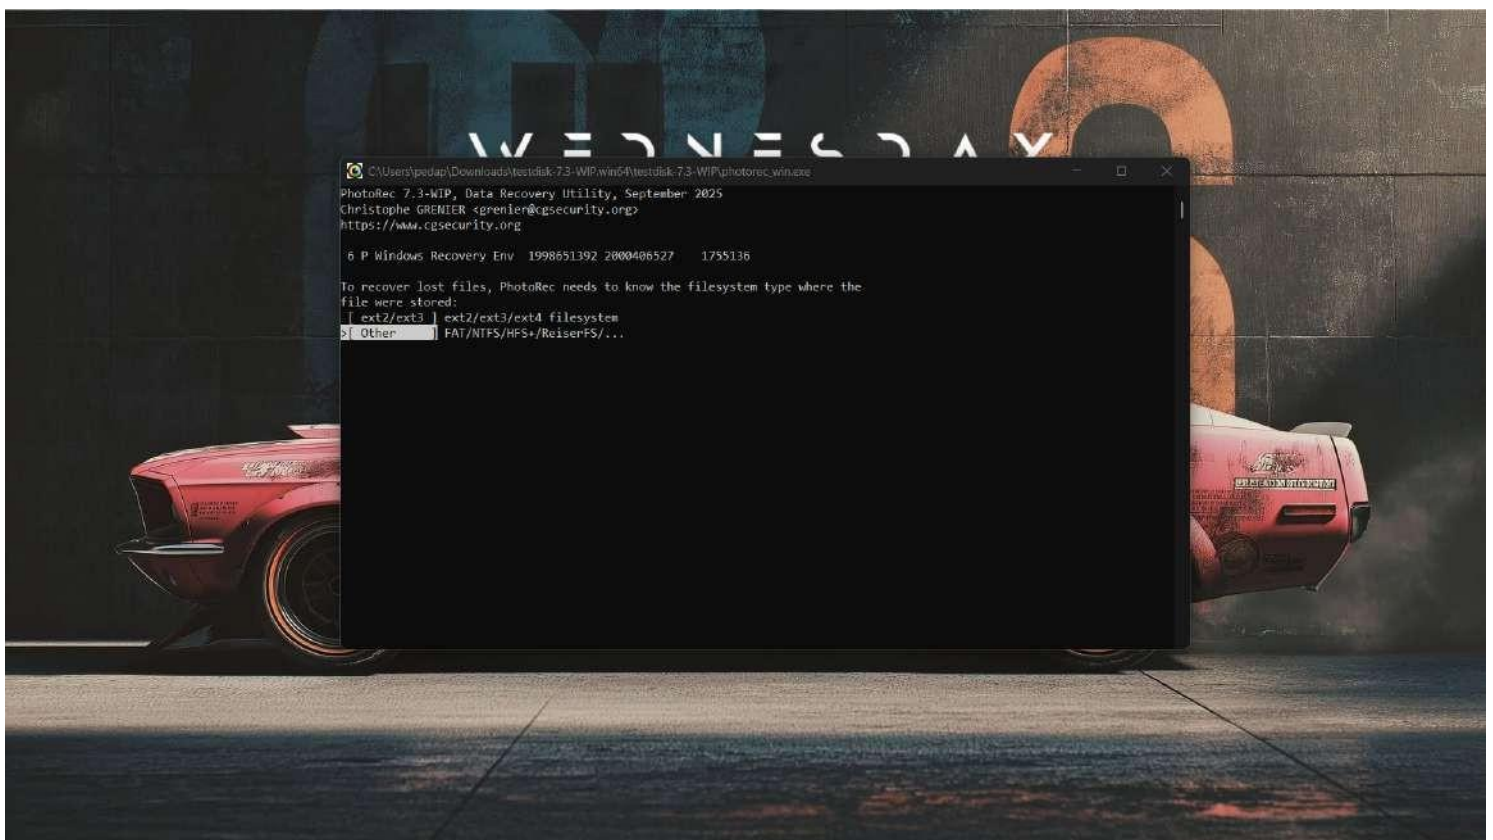

10. Open PhotoRec and select media from the list.

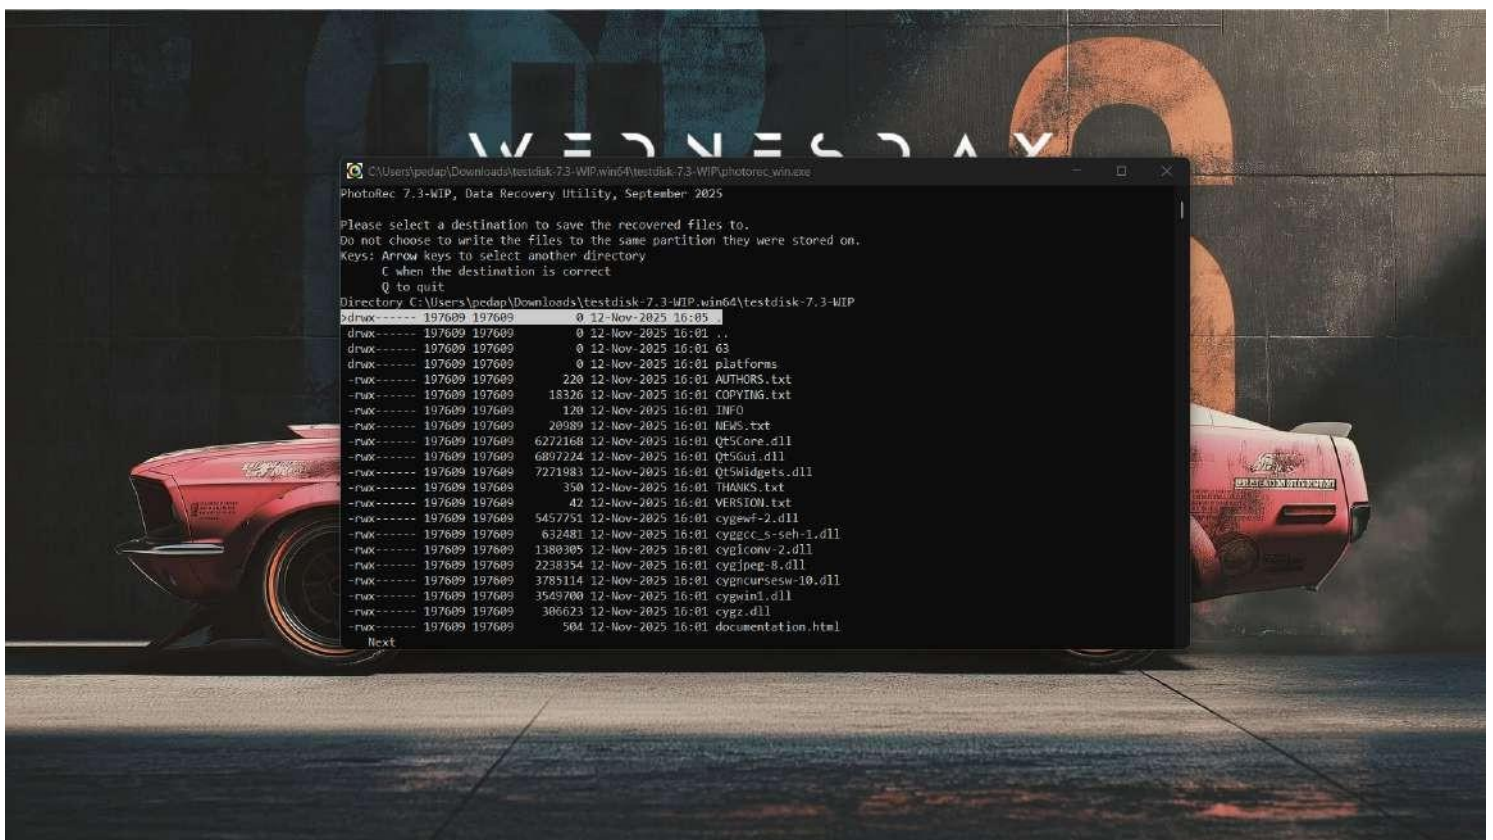

11. Select a file system from the listed option to start the file recovery.

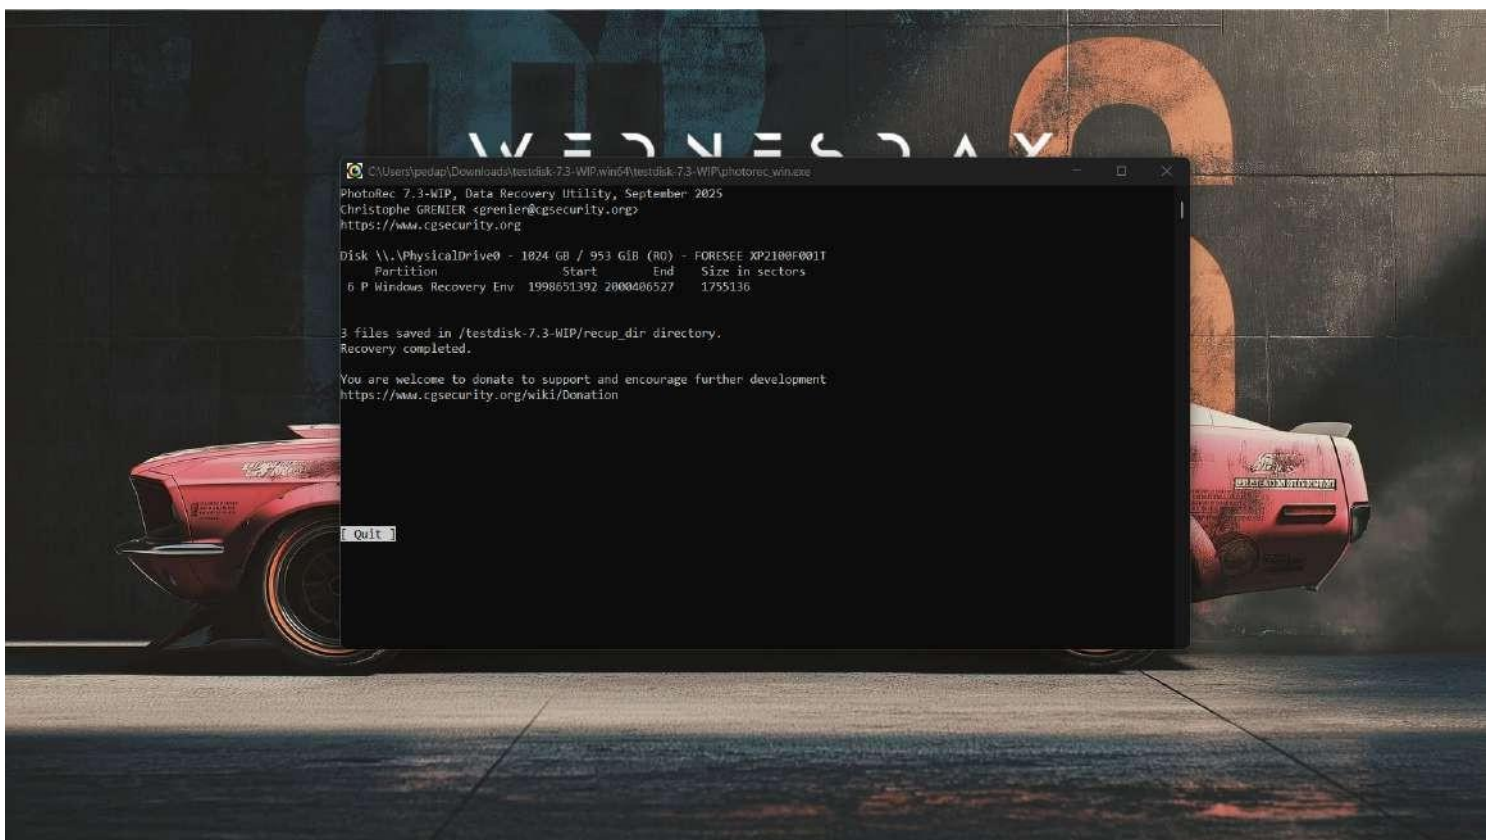

12. Select the filesystem type where the files were stored to recover the lost files.

13. Select a destination to save the recovered files.

14. Finally, the recovered files are stored in the destination that you have selected.
15. Click on Quit to exit the tool.

Result :

Thus, the recovery of damaged or deleted files from the storage device using the tools **TestDisk** and **PhotoRec** was completed successfully.
